## **DETAILED ACTION**

### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Information Disclosure Statement***

2. The IDS, filed 8/11/04, has been considered in full.

### ***Drawings***

3. The drawings, filed 2/14/05, are acceptable as formal.

### ***Specification***

4. The abstract of the disclosure is objected to because it should avoid phrases which can be implied, such as "according to the present invention". Correction is required. See MPEP § 608.01(b).

### ***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3682

6. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 8035552 (cited by Applicant) in view of Holifield (6,207,050).

JP 8035552 shows a power roller which has an oil feed passage (42) which feeds oil to bearings (33, 29, 25), the power roller is sandwiched between two toroidal surfaces (4a, 8a); these two toroidal disks are independently rotatable and the angle of the power roller effects a ratio change of the transmission.

JP 8035552 does not show a filter or a magnet in the lubricant flow path. Holifield shows a lubrication system where it is disclosed that it is old and well known to use a filter (12) and a magnet (20) to clean oil of non-magnetic particulates (filter) and ferrous particles.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate an oil filter design of Holifield into the infinitely variable transmission of JP 8035552 since the use of oil filters with magnets is a well known practice as taught by Holifield.

### ***Conclusion***

Proper use of this procedure will result in such communication being considered as timely if the established date is within the required period for reply. The Certificate should be signed by the individual actually depositing or transmitting the correspondence or by an individual who, upon information and belief, expects the correspondence to be mailed or transmitted in the normal course of business by another no later than the date indicated.
